Seeking fullstack developer or team lead position with potential to grow towards machine learning

Skills

Leadership, Analyst, Architecture, UX

As team lead, I have experience leading a successful and significant multi-year project throughout all phases: conception, design, team building, implementation, testing, deployment, and maintenance.

Fullstack Development

Experience not just with the latest front-end frameworks (especially Angular), but I have the deep experience of the web-as-a-platform that can only come from being a web developer for literally decades. Specialties include databases, API's, performance, and web application security.

Machine Learning Engineering

Currently working on my first professional machine learning project. Additionally, I study more and more almost every day. I'm just at the beginning of my journey, but have a lot of passion for the field.

Experience

5 years - management, project lead, business analytics
>20 years - programming projects with a wide variety of languages and technologies
>18 years - databases
>10 years - staffing and human resources
6 years - education, instruction, and related (including volunteer work)

Full list of positions available www.linkedin.com/in/bkinsey

Education

Passionate lifelong self-learner.
Bachelors, Computer Science *cum laude*, University of NH
