Seeking remote full time position with growth and leadership potential.

Skills

Master Level Coding
Personal coding style influenced by principles of functional reactive programming, and lambda calculus; with emphasis on self-documenting, testable code; and developer ergonomics.

Front-end Development
Deep experience with Angular (1.x and modern versions). Learning React and Vue. Architect-level UX design skills. Evangelist of PWA, mobile-first, and responsive layout.

Client-Server Architecture
Expert designing and consuming APIs and microservices. Evangelist of GraphQL over REST when practical: in my opinion, GraphQL massively decouples client and server dev process bottlenecks.

Back-end Development
Nodejs expertise. Focus on security, authentication, and authorization. Fan of JWT. Strong skills with both relational/SQL and NoSQL databases, query optimization, and caching strategies.

Experience

>20 years - programming projects with a wide variety of languages and technologies
>18 years - databases
4 years - management, project lead, business analytics
6 years - education, instruction, and related (including volunteer work)
10 years - staffing and human resources
